- Array Edge Screen Critter Guard by SnapNrack - 8" x 100' Roll ()
- Array Edge Screen Critter Guard by SnapNrack - Array Edge Fastener Clip ()
- Array Edge Screen Critter Guard by SnapNrack - Add-A-Lip Box Frame Adapter ()

Product Summary

Array Edge Screen Critter Guard by SnapNrack is a universal array guard system - attaching to any solar array. Keep Animals and debris out, no drilling into PV Modules. Best of all, it attaches to the inside edge of module frames, so the mesh screen is inset naturally from the array edge, creating a much cleaner appearance than other mesh systems.

Product Description

Squirrels, rats, raccoons, pigeons, lions, tigers, & bears. Well, if you have the last 3 critters on your roof, you have bigger problems. But for the others, use the Array Edge Screen Critter Guard by SnapNrack. This is a universal array guard system - attaching to any solar array via the outside edge of the module frames. Keep Animals and debris out, no drilling into PV Modules. With a black finish, your array will be protected with minimal impact on aesthetics.

Why You Might Need Array Edge Screen...

This is an attractive system that mounts a mesh screen around the edge of a PV module array to protect from infiltration by pesky birds, rodents and debris. The mesh screen is vinyl-coated steel - rigid enough to keep out even the most industrious squirrel.

8", 6", or 4" high mesh to best match the height of your modules off the roof deck. Available in 100' rolls. The clips mount through the screen & hook to the underside flange of the module without any drilling. The black poly coated screen, and all the black hooks, offer a long lasting protective solution as well as creating a clean visual aesthetic.

Easy Installation...

Installs on perimeter of solar array between solar panels and the roof.

The clips attach to the bottom flange of the module frame and hook the screen into place. You are free to adjust the height of the screen by approximately 1" (ie the module frame height) so that it remains below the face of the solar modules, and yet reaches to the roof deck. Cut a couple of mesh squares at the bottom to make a neat bend when you come to inside and outside corners.

Module Clips spaced every 2-4 feet will provide a protective barrier to guard against animals and debris. Be sure to place clips within 6" of corners in order to provide a robust fit.

Screens can be trimmed to required height and length with common wire cutters.

Available SnapNrack Edge Screen Kit Sizes...

232-03998 : 4" Screen Roll : 100', black poly coated, no clips

232-04077 : 6" Screen Roll : 100', black poly coated, no clips

232-04076 : 8" Screen Roll : 100', black poly coated, no clips

What if my modules don't have a standard frame?

The box frame adaptor allows for mounting on module frames that lack a flange to mount to (1 per clip). Call us if you need this solution.
