## Product Summary

Simply an excellent meter. Quick and accurate reading on your AA, AAA, C, D, & 9V batteries. If you use rechargeables NiMh batteries, this is your meter. Features a scale to properly read rechargeables (since they are a slightly different voltage than alkalines).

## Product Description

Uses a 9V battery to operate the tester, which means you get more accurate readings.

Two scales are provided... one for standard alkaline batteries (Duracell, Energizer, Rayovac, etc), and another scale for measuring rechargeable NiMh batteries. If you rely on NiMh rechargeables, you will appreciate a good meter.

- For AAA, AA, C, D, 9V - Indicator in 25% steps - Easy to use - 3 year warranty

## Product Attributes

- Dimensions: N/A
- Weight: 0.6 kg
