Product Summary

Meet the Enphase Envoy-S, the brains of Enphase microinverter solutions. This next-generation Envoy-S gateway provides energy usage insights, remote update capabilities and load management. Meter version.

Product Description

Meet the Enphase Envoy-S, the brains of Enphase microinverter solutions. It's job? Collecting real-time data from your microinverters, & delivering remote updates

back out to them. The Envoy keeps your entire system in constant communication. This next-generation Envoy-S gateway provides energy usage insights, remote update capabilities and load management. In brief, it enables a more cost-effective and reliable solar installation while adding significant value for system owners.

This is the Meterd version

- Consumption monitoring for total energy insight - Revenue grade accuracy, ANSI C12.20 compliant - Bi-directional communications lets Envoy adapt to future utility requirements - Flexible networking options with integrated Wi-Fi - Ready for plug-play cellular networking - Connects up to 600 microinverters

The Enphase Difference

Enphase is on a mission to bring solar energy to the next level, one where it's ready to meet the energy demands of an entire globe.

More Power From Your Solar Panels

Enphase Microinverters get more power from the same solar panels. This means greater savings & value from your system. Each microinverter connects to a single solar panel. Unlike other types of solar inverters, if there is a shaded, dirty, or problem panel, the rest of the system keeps running smoothly. The result is increased system power yield of 3-12% over standard string inverters (according to multiple independent studies incorporating a variety of shading/soiling issues).

The Enphase Envoy shows you the status of all panels in real time.

Solar You Will Love

Every part of the Enphase system is designed to have a minimal impact on your building. Wiring and equipment stay out of sight, and the low voltage AC design improves safety.

Want to start with only a few solar panels & expand in the future?

Standard string inverters require specific string sizes of panels, and have limitations on how the system can be expanded. But Enphase MicroInverters let you install as

many panels as you wish, in multiple sections. The ultimate solar power system design flexibility.

Reliability, Inside & Out

Enphase products are designed to deliver more power, with less maintenance. The proof is in the longest warranties on the market. Up to 20 years.
