Product Summary

We love equipment that serves multiple purposes, and the Guide 10 plus is definitely one of them.

The Guide 10 plus is a battery pack that uses AA rechargeable batteries as its power storage. It charges from USB or 12V sources, and provides USB output. Extremely handy!

Four high-quality Goal Zero AA batteries are included (2300mAh).

Product Description

Out of Stock Alternative : Enerplex Jumpr Quad

The Guide 10 plus is an ultra lightweight USB battery & charging system that fits in your pocket. Use as a single unit power pack to power your device or as a power source to recharge the batteries for use in any AA or AAA battery powered device.

Supports all USB devices, even tablets...

Fully Apple compatible, and works with Blackberries, Samsung models, & other smart phones & eReaders. Tablets, like the iPad, will power themselves from the Guide 10+, but will not charge. (iPads require a 2.1A USB port to 'charge')

Features...

- Charge AA/AAA batteries from the sun - Power USB devices directly (even while the unit is plugged into solar) - Recharge your cell phone 1-3 times per charge - Built-in LED flashlight that runs 20+ hours per charge - Stores power for charging devices day or night - Very small, about the size of a cell phone - Can charge via USB or 12V

Includes four high-quality Goal Zero AA batteries (2300mAh).

What's in the Box:

1 x Guide 10 Plus Power Pack 1 x Super Charge Cable (for connecting to the Nomad 7 solar panel)

4 x AA rechargeable NiMh batteries plus AAA adaptor (2300mAh)

Technical Specs...

Output : USB, 5Watts max (5V / 1A)

Weight : 6.4oz / 181g

Dimensions : 6 x 10 x 2cm / 2.5 x 4 x 0.75"

Warranty : 1 year

Operating Temperature : 0°-40°C

Part# : 21005

...

How Do I Use The Guide 10 Plus?

Simple. Insert AA or AAA batteries. Plug the Guide 10+ into any USB port or USB solar panel. The charging light will let you know when the batteries are charging, and when they're finished. The Guide 10 will turn off when the batteries are full.

Charge your USB devices by plugging into the Guide 10's USB output port just like you would plug it into any USB port on your computer or wall adaptor. Slide the switch on the face of the Guide 10 from 'Off' to 'On', and power will flow. The Guide 10 sends power to your device at a rate determined by your device.

Is it safe for my phone or other USB device?

Yes. The power from the Guide 10+ follows USB standards, and your phone or other device will determine how much power to take, and when to stop charging. Exactly the same as charging from any other USB port.

What about charging camera batteries?

The battery charger that came with your camera is meant to plug into a wall, and will not work with the USB output of the Guide 10+. BUT, have no fear, there are products that are designed to charge all types of batteries from USB sources. Check the 'Accessories' tab for links to chargers that handle small camera batteries, & larger dSLR & camcorder batteries.
