Product Summary

The MATE system display and controllers are complete management tools for your OutBack Power system. Through the use of a single MATE, you can remotely manage and monitor multiple inverter/chargers, MX60s and any future OutBack power conversion and control products.

Product Description

The MATE system display and controllers are complete management tools for your OutBack Power system. Through the use of a single MATE, you can remotely manage and monitor multiple inverter/chargers, MX60s and any future OutBack power conversion and control products.

The MATE and MATE2 are packed full of features to make system management simple. The easy-to-read 3.1" (8 cm) LCD is backlit for dark operating conditions. Four soft keys allow easy context-based navigation of menus and functions. Two hot keys give immediate access to AC and inverter functions.

Mate Highlights - Simple system management - Four soft keys allow easy context-based navigation of menus and functions - Built-in clock and calendar function - Two hot keys give immediate access to AC and inverter functions
A built-in clock and calendar function enables timer based programming of inverter and charger operation, allowing operators to set the system to work with time-of-day power rates or to limit a generator's runtime to a specific time period of the day or week. All of your settings are stored in permanent memory to eliminate the need to reprogram in the event of a system shutdown or battery replacement.

The MATE and MATE2 include a RS232 port with DB9 jack for connection to the serial port of a PC computer. Through

the use of optional WinVerter software, operators can perform actions such as data-logging and graphical display of the system's operation and performance.

What's The Difference Between the Mate & Mate2?

The MATE system display and controller is surface mounted while the MATE2 is flush mountable in a wall cut-out.

Product Attributes

- Dimensions: N/A
- Model: Mate (Surface Mount), Mate2 (Flush Mount)
