Product Summary

The most popular size of lead-acid battery pack. A compromise between weight, power storage capacity, & functionality. Although smaller SLA AGM batteries can support AC inverters, this is the battery size where it starts to perform optimally.

Product Description

Choose a Battery & Option Package...

Battery Only A durable 12V DC battery **Includes...** 12Ahr SLA battery with fast tab connectors

Battery with Input/Output Connectors The basic battery wired with a male 12V input cable, and a fused 12V CLA socket. **Includes...** 12Ahr AGM Sealed Lead-Acid battery 12VDC CLA outlet (fused) 12VDC input cable

Battery with Solar Input Regulation & Connectors The battery wired with solar charge controller, input plug, output socket **Includes...** 12Ahr AGM battery 6A/100W solar input charge controller 12VDC CLA outlet (fused) 12VDC input cable

Specifications...

Charging System: 12V vehicle charging cable or solar panel options are available.

Battery: Sealed lead acid AGM Capacity: 12 Ahr

DC Output: Single 12V CLA socket

Dimensions: 6 x 3.75 x 3.75" / 15.2 x 9.5 x 9.9cm Weight: 8.1 lbs (3.7kg)

Power storage...

The Outpost Power 12 includes a durable 12 amp-hour sealed lead acid battery with AGM construction for reliable service in a broad range of temperatures & long life - longer than gel cell batteries. This type of battery will lose very little power during times of storage & transport. It has enough guts to drive a small AC inverter like the recommended Smart AC 150 Dual. Plus you now have the ability to charge the unit from your vehicle outlet on your way to the trailhead.

As non-spillable, sealed batteries, the kits are not regulated for air travel, so take your OP-12 kit with you overseas. MSDS information is available upon request.

DC Outlet option...

The Outpost Power 12 is available with an optional standard DC CLA outlet socket (like in your car), plus charging cable for charging from your vehicle outlet or solar panel. An AC wall charger is not provided.

Flexible charging options...

When driving to the trailhead, you can top-up the battery charge by plugging the Outpost Power kit into the cigarette socket in your vehicle (optional). If you plan to be away from any charging source for several days, take along one of our compact folding solar panels (20 Watt) to help offset your power usage. We recommend selecting the solar charge controller option if you plan to connect to a solar panel of more than 5 Watts for any length of time.

Who's buying?...

The Outpost Power line of portable power solutions have been designed for, and are used by researchers, rural 3rd world educators, relief workers, medical teams, search & rescue, hunters, sportsmen, journalists, and anyone else who needs reliable power beyond the reach of an extension cord.
