Product Summary

Designed, engineered and manufactured in the United States, The LightSaver is durable and includes a high efficiency charging circuit so you get more solar power into your device over the course of any day than any charger in its power range. Period.

Product Description

The LightSaver is an incredibly handy 3 Watt, 12 Watt-Hour, self-contained high-sensitivity thinfilm solar module with integrated lithium storage battery. Like

all Powerfilm, it is designed, engineered and manufactured in the United States. It's durable and includes a high efficiency charging circuit so you get more solar power into your device. Need more power? Check out the [LightSaver MAX!](#)

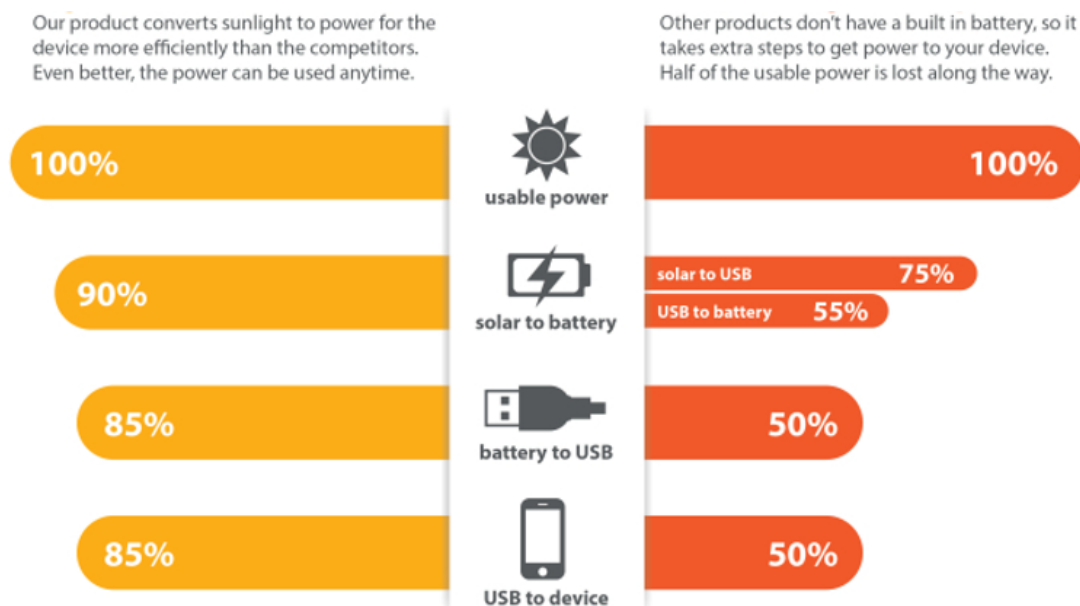

LightSaver features durable solar cells that can take a beating. We learned from our military contracts and pass on that same technology to you. Don't mess with bulky panels that fill up your pack. A compact design lets you store it anywhere, even your pocket! When you need it, connect your USB device and charge it up. The ultra efficient 3,200 mAh battery will keep you connected wherever you are.

Never worry about your cell phone or other electronics dying again!

...

Why LightSaver?

Using thin film solar cells has its advantages over standard crystalline cells. The LightSaver is able to capture power in much lower daylight levels than standard solar chargers. This means it starts charging earlier in the day, and later in the afternoon, and provides more useable energy over the course of any day of the year than any other solar charger in its power range.

When reliable power is needed, Powerfilm Solar delivers.

LightSaver Specs

Solar Module Power : 3 Watt (max)

Battery Storage : 12 Watt-Hour (3200mAh)

Size: Rolled: 19.8 x 3.8cm / 7.8" x 1.5"

Unrolled: 19.8 x 47cm / 7.8" x 18.5"

Weight: 139g / 4.9 oz

Power In: Solar + USB

Power Out: 1 USB (5V, 1A)

Solar Charge: 6-8 hours full sun

Wall Charge: 3 hours
