## Why Use A SolaDeck Enclosure?

As the desire to utilize solar energy grows, so does the need for a convenient, virtually unnoticeable enclosure to penetrate the roof deck. SolaDeck both houses and protects the solar PV wiring for a fast, easy, and safe photovoltaic wire installation.

Solar panel wiring can be installed with consistency, time savings, and confidence every time. Unlike other solar array wiring enclosures, SolaDeck incorporates a unique flashing that is a seamless part of the enclosure and prevents incorrect penetrations in the roof system.

SolaDeck 0760-41 AD Enclosure/Combiners Provide...

Flashed, seamless, weather-tight roof protection

Roof penetration standard in the roofing industry

Exceptional low profile design

Versatility to all PV systems

Consistency in every installation

A professional appearance to your PV installation

Models that are ETL listed and labeled to UL standards
