## Product Summary

So, imagine you are in some exotic foreign country, sitting down to a meal in the hotel restaurant. The waiter brings you a glass of water... STOP! Do you know what might be in there? Maybe nothing, but should you take the chance? Remember that friend who spent their holiday in the bathroom? And what about medical treatment in this country... do you risk it?

## Product Description

So, instead, you reach into your bag & take out your Trav-L-Pure water purifier pack. You pour the glass of water in the top, and pump pure water out into your own glass. Neat, tidy, and safe.

Drink pure, safe water anywhere in the world. The Trav-L-Pure purifies water instantly without chemicals or electricity. Ideal for resort and business travel.

Totally self-contained - no backwashing, hoses or chemicals needed. Just pour source water into the 'easy-fill' pre-screen & pump it through to quickly fill a glass or water bottle. Seals tight for easy packing.

This is a 'Purifier', not simply a filter

Unlike typical water filters & microfilters, General Ecology's unique "Structured Matrix" technology is comprehensively effective in removing all 3 classes of microbiological contaminants:

Cysts (ie. cryptosporidia, giardia)

Bacteria (ie. e.coli, fecal coliform)

Viruses

The First Need is also effective in removing a wide range of specific chemical contaminants, including...

Pesticides

Herbicides

Industrial solvents

Chlorine

Foul tastes and odors

The Trav-L-Pure does all this instantly, with no hold time, and no chemical treatment. The Trav-L-Pure is fully certified to meet the EPA's very rigorous Microbiological Standard for Drinking Water Purifiers.

#### **How it works...**

General Ecology's unique "Structured Matrix" utilizes three natural, non-chemical mechanisms to purify your water better than any other technology. The ULTRAFINE CARTRIDGE microstrains down to 0.1 micron (0.4 absolute) - small enough to remove Giardia, cryptosporidia, and harmful bacteria. A BROAD SPECTRUM MOLECULAR CAPTURE process removes chlorine, foul tastes and odors, along with specific pesticides, herbicides and solvents.

ELECTROCHEMICAL SEPARATIONS then remove colloids and other particles even smaller than those removed by ultrafine microstraining.

Due to this combined effectiveness, the Trav-L-Pure is certified to meet the EPA Guide Standard for Microbiological Purifiers against bacteria, cysts, and viruses. [Click here to view a performance comparison chart.](#)

The General Ecology name means purity...

General Ecology has been developing some of the finest water purification and micro filtration systems since 1973.

Located near Valley Forge Park Pennsylvania, GE products are now sold in over 40 countries worldwide. The company's products are designed to be compact, lightweight, and to reliably remove contaminants naturally, WITHOUT CHEMICALS OR ELECTRICITY..
